Milestone 4: reflection

Creating this app didn't go as well as I would have hoped. There were many circumstances that prevented me from managing my time wisely. I have a lot of projects in other classes that I was working on and I couldn't let my group down and then for the time I allocated for this project I had to go to a funeral. I did the best that I could with the time that I had however.

I really like the design of my app. All the bright colors and big buttons are my aesthetic. I wanted to add more features than I was able to. First I would have wanted to have time to add data persistence, like I had for the IOS app, but I knew I should save that for last because of how much time it took for project 1. Another feature I decided I wanted to add after the presentation was a edit text field so that user can write in a message. Deleting a workout would be a good feature too. When I decided to implement the pickers I had no idea how difficult it would be to access their information. I sadly, only ended up getting the current date and time which is a feature of SDK 23 and above. I want to improve this app in the future, I think it has some good potential.

I used your notes for reference as well as stack overflow. The buttons I made myself in illustrator.
